Website Report

CAMPUS BOOK CLUB | INDIVIDUAL MINI PROJECT

Student: Yousef reda fahmy mohamed
Student ID: 224111449

1. Topic and purpose

Campus Book Club introduces a student reading club, recommends books, displays a weekly timetable and provides a practice joining form. It is a static HTML and CSS project with simple content and shared navigation.

2. Site map

Page	Content
Home - index.html	Welcome, illustration, ordered list and link to join.
Books - books.html	Two book articles, unordered lists and an audio player.
Schedule - schedule.html	Weekly timetable with merged table cells.
Join - join.html	Demonstration membership form.

Every page links to all four pages using the navigation menu. Home also links directly to Join. A Top link returns to the start of each page.

3. Live website

https://omarrrfds.github.io/yousef-224111449-book-club/

The following screenshots show the published purple design. The source files included in the ZIP are the earlier supplied version; only this report has been updated. The live appearance may therefore differ from that local version.

HTML Requirements

CAMPUS BOOK CLUB | INDIVIDUAL MINI PROJECT

Requirement	Where it appears
Structure	All pages: doctype, head, title, charset, viewport, description and body.
Semantic elements	header, nav, main and footer throughout; section and aside on Home / Schedule; article on Books.
Text and links	Headings, paragraphs, strong and em; internal navigation, external book link and Top anchor.
Image and lists	Home: books.svg with alternative text and an ordered list. Books / Schedule: unordered lists.
Table	Schedule: caption, headers and data cells; rowspan for Library and colspan for the Friday activity.
Audio	Books: an audio element with controls and a local WAV file.
Form inputs	Join: text, email, password, number, date, radio and checkbox.
Other form controls	Join: select, textarea and submit button; labels and a fieldset for radio choices.

Form behaviour

The form demonstrates input controls and browser validation. It does not create membership or save personal details. Use sample details only. No backend or database is provided.

CSS and Screenshot Notes

CAMPUS BOOK CLUB | INDIVIDUAL MINI PROJECT

Requirement	Implementation
External stylesheet	style.css is shared by all four pages. Bootstrap CSS is loaded separately.
Selectors	Element, class and grouped selectors; a:hover pseudo-class.
Visual styles	Colours, backgrounds and fonts; padding, borders and margins demonstrate the box model.
Layout	Flexbox for navigation, Grid for book articles and display:block for the image.
Positioning	The Top link uses fixed positioning.
Responsive design	Viewport meta and a media query; the Books layout becomes a single column at narrow widths.
Bootstrap	Button classes and form-control / form-select style the form. Bootstrap supplements the custom CSS.

Capture method

Screenshots were taken from the published website. Desktop viewport: 1363 x 936 CSS pixels. Narrow viewport: approximately 545 x 374 CSS pixels using browser zoom. The narrow images demonstrate responsive layout; they are not captures from a physical phone. Consecutive narrow screenshots show the page while scrolling, with some overlap.
